1 **INTRODUCTION**

2  
3 The Residential Utility Consumer Office ("RUCO") hereby replies to the  
4 initial briefs of Arizona Public Service Company ("APS" or the "Company") and  
5 other parties. In its Initial Closing Brief, RUCO addressed many of the  
6 arguments offered by the parties in their initial briefs. RUCO will not repeat those  
7 arguments here.  
8

9 **CRITERIA FOR SETTING RATES**

10 APS correctly notes that the largest conceptual difference between the  
11 Company and the positions of the Utilities Division ("Staff") and RUCO concerns  
12 whether the Commission should consider future impacts of new rates in the form  
13 of projections of financial results in future periods.<sup>1</sup> APS asserts that case law  
14 requires that the Commission consider projected impacts of rates to insure that  
15 rates will produce a reasonable rate of return. The Commission's traditional rate  
16 making approach determines rates based on examination of the expenses,  
17 revenues and rate base in a historical test year. RUCO is not aware of any  
18 Arizona case that has overturned a Commission rate decision based on a claim  
19 that the historical test year approach inevitably fails to satisfy constitutional  
20 requirements.

21 The Commission's traditional rate making approach does consider the  
22 future in one important respect. The Commission's examination of an  
23 appropriate return on equity looks forward to determine expected returns. Both  
24 the discounted cash flow method and the capital asset pricing model include

---

<sup>1</sup> APS Brief at 3.

1 estimates of growth or inflation. This level of examination of future return  
2 expectations is adequate to meet any requirement that the future impacts be  
3 considered by the Commission in setting rates.

4 In addition, the Commission does recognize adjustments to the historic  
5 test year for matters that are both known and measurable changes to conditions  
6 that existed in the test year. However, the Commission should not rely on  
7 projections of future financial results that are based on shaky estimates of  
8 financial results. To do so would undermine the well-established foundations on  
9 which the Commission sets utility rates.

## 11 **RATE BASE ISSUES**

### 12 **Working Capital**

13 APS claims that the non-cash expense of depreciation should be included  
14 in its cash working capital calculation, and that its cash expense of interest  
15 should be excluded from the calculation. Staff and RUCO agree that APS is  
16 wrong on both counts. Because cash working capital is the cash necessary to  
17 pay the day-to-day expenses incurred in providing utility service,<sup>2</sup> depreciation  
18 expense should not be included in that calculation, but interest expense should  
19 be.

20 APS argues that depreciation, despite it not being a cash item, should be  
21 included in the cash working capital calculation because rate base is reduced by  
22 the recorded level of depreciation, thereby creating a gap between the time when  
23 customers are credited for their payment of depreciation expense and the time

---

<sup>2</sup> Staff Brief at 17.

1 they actually pay for it. However, APS' argument overlooks the fact that the rates  
2 that customers pay in a subsequent month are not reduced due to the prior  
3 month's recording of depreciation expense, because rates change only upon a  
4 new finding of fair value in a rate proceeding. In fact, the subsequent month's  
5 rates are based on levels of undepreciated plant at the end of the test year in the  
6 last rate case. For example, the depreciation APS booked in October 2006 did  
7 not result in lower rates in November 2006. Instead, the rates billed in November  
8 2006, and collected in December 2006, were based on the undepreciated plant  
9 at the end of December 2002, which was the end of the test year in APS' last  
10 rate case.

11 The Commission has long recognized that depreciation is a non-cash  
12 expense, and is not appropriate to include in a calculation of cash working  
13 capital. There is no reason to change that well-founded conclusion.

## 14 15 **OPERATING INCOME ISSUES**

### 16 **Estimated Net Lost Revenues from Demand Side Management**

17 APS has misconstrued RUCO's reasoning for opposing APS' adjustment  
18 of its estimate of revenue losses that could result from the implementation of  
19 demand side management ("DSM") programs mostly since the end of the test  
20 year. APS asserts that RUCO originally claimed that the 2005 Settlement  
21 Agreement precluded APS' proposed adjustment to decrease test year revenues,  
22 but then modified its argument in recognition that the Settlement Agreement  
23 allows a request for net lost revenues (which APS calls a "conservation

1 adjustment" in its Initial Post-Hearing Brief) in a rate case. The Settlement  
2 Agreement does not permit an adjustment to test year revenues in a rate case.  
3 Instead, the Settlement Agreement provides that, to the extent actual test year  
4 revenues reflect any decrease in revenues due to implementation of effective  
5 DSM programs, APS can seek rate recovery based on that lower level of test  
6 year revenues.<sup>3</sup> The Settlement Agreement specifically prohibits the recovery of  
7 net lost revenues that were not reflected in the test year of a future rate  
8 application.<sup>4</sup> The adjustment to the test year revenues that APS proposes is  
9 inappropriate precisely because it is an adjustment, rather than a decrease in  
10 revenues as a result of a DSM program actually resulting in lower revenues  
11 during the test year. RUCO has not changed its position in any way. It has  
12 consistently held that the Settlement Agreement prohibits the recognition of a net  
13 lost revenues adjustment.

14 In addition to the fact that the Settlement Agreement prohibits APS' net  
15 lost revenue adjustment, RUCO offered two other reasons the adjustment is  
16 inappropriate. First, the adjustment is based on APS' *estimates* of revenue  
17 decreases that have not yet been realized, and therefore it is not known and  
18 measurable. APS minimizes this point by claiming that its adjustment "merely"  
19 recognizes the impacts of DSM expenditures that occurred during the test year  
20 and in 2006.<sup>5</sup> However, while the amounts APS spent on DSM programs during  
21 the test year and in 2006 may be known, the revenue impacts of its DSM  
22 programs, most of which were not even implemented until after the test year, are

---

<sup>3</sup> Decision No. 67744 at paragraph 46 to Settlement Agreement (excerpted as Exh. RUCO-5).

<sup>4</sup> *Id.*

<sup>5</sup> APS Brief at 68.

1 estimated. In fact, APS suggests that its DSM programs are in their initial  
2 stages, to the point that it would not even characterize them as "up and  
3 running."<sup>6</sup>

4 RUCO also objects to the net lost revenue adjustment because it results in  
5 a mismatch between the rate making elements used to set rates. It would result  
6 in recognition of revenue decreases beginning in 2006 and later, but not  
7 recognize revenue increases over the same period due to customer growth.

8 Staff's objections to APS' net lost revenues adjustment overlap with  
9 RUCO's in some respects, and are different in others. APS mistakenly claims  
10 that RUCO and Staff both argued that the adjustment would result in double  
11 compensation because APS is entitled to receive a performance incentive  
12 pursuant to the terms of the Settlement Agreement.<sup>7</sup> RUCO's objections to the  
13 DSM net lost revenue adjustment was based on the three points discussed  
14 above, not on any claim of double-recovery. RUCO has no objection to APS  
15 receiving the performance incentive under the terms of the Settlement  
16 Agreement. However, whether or not APS qualifies for the performance  
17 incentive, recognition of the net lost revenues adjustment is unjustified.

#### 18 19 **Pension Expense**

20 APS proposes that the Commission increase rates by \$44 million per year  
21 to "pre-fund" its pension. APS asserts that there is no reason to believe the

---

<sup>6</sup> APS Brief at 118.

<sup>7</sup> APS Brief at 121.

1 under funding will be eliminated or reversed on its own.<sup>8</sup> But nearly one-third of  
2 APS' 2005 pension costs consisted of the "catch-up" amortization.<sup>9</sup> Further, APS  
3 admits that the under funding is mostly attributable to lower than normal interest  
4 rates used to discount the pension obligation to calculate the required pension  
5 plan contribution.<sup>10</sup> It is not difficult to envision that over time, interest rates  
6 would return to more normal levels, thereby reversing the under funding situation.  
7 Now, in an environment of repeated rate increases, is not the time for the  
8 Commission to accelerate the collection of pension expense for an under funding  
9 that is likely to correct itself over time without extraordinary Commission action.

10 APS also asserts that its accelerated pension recovery proposal will have  
11 a perpetual benefit because it will result in higher fund balances and will have a  
12 "levelizing impact on rates."<sup>11</sup> But increasing rates to an unnecessarily high level  
13 now, only to maintain them at that level later, is no benefit to customers.

#### 14 15 **PWEC & Sundance O&M Expense**

16 APS characterizes RUCO's proposed adjustments for PWEC and  
17 Sundance Operations and Maintenance ("O&M") expense as being premised on  
18 lower operating levels of the plants.<sup>12</sup> Unfortunately, APS has oversimplified  
19 RUCO's position. RUCO's adjustment with respect to the PWEC units O&M  
20 expenses begins by correcting the actual expenses from which APS made  
21 further adjustments. APS began with the actual expenses for the calendar year

---

<sup>8</sup> APS Brief at 60.

<sup>9</sup> Exh. S-34 at 82 (Dittmer direct).

<sup>10</sup> APS Brief at 60.

<sup>11</sup> APS Brief at 60, 61.

<sup>12</sup> APS Brief at 57 (Sundance) and at 56 (PWEC).

1 2004. RUCO corrected that to the test year, October 2004 through September  
2 2005.<sup>13</sup> RUCO has not objected to the concept that generating unit O&M  
3 expenses be adjusted to account for projected levels of operation (which can  
4 differ from year to year based on maintenance schedules and other factors). The  
5 difference between RUCO and APS' positions is which projections to use. For  
6 the PWEC units, APS relied on projections made in 2005, of usage levels over  
7 the years 2006-2011. Pro forma adjustments for plant performance should be  
8 based on very specific known and measurable information; thus, more near-term  
9 generation forecasts are usually preferred. However, APS' most recent  
10 projections of the PWEC units' 2007 and 2008 generation levels differ  
11 significantly from their 2006 levels, and therefore the 2006 levels would not be  
12 representative of expected conditions.<sup>14</sup> RUCO therefore proposes that O&M  
13 expense be based on average projected performance over the years 2006-2008.  
14 RUCO's adjustment to Sundance O&M also is based on projected performance  
15 over the period 2006-2008, which is significantly lower than the performance  
16 level utilized by APS.<sup>15</sup>

17 In its testimony, APS responded that Staff's consultants' operation audit of  
18 generating units found the O&M patterns were consistent with system operational  
19 requirements.<sup>16</sup> RUCO's surrebuttal testimony replied that the Staff audit was of  
20 the historic O&M expenditures, and that it does not conflict with RUCO's

---

<sup>13</sup> Exh. RUCO-29 at 4 (Schlissel direct).

<sup>14</sup> Exh. RUCO-29 at 7 (Schlissel direct).

<sup>15</sup> Exh. RUCO-30 at 9 (Schlissel direct).

<sup>16</sup> APS Brief at 56, 57.

1 adjustment to forecasts of future O&M expenses.<sup>17</sup> APS has not disputed that  
2 testimony. Additionally, Staff itself finds RUCO's adjustment consistent with  
3 Staff's audit conclusions. Staff's witness Dittmer proposed his own adjustment to  
4 APS' Sundance O&M projected expenses, and testified that his adjustment and  
5 RUCO's adjustment are not mutually exclusive.<sup>18</sup> Mr. Dittmer also concluded  
6 that RUCO's adjustment to the PWEC O&M is not unreasonable.<sup>19</sup> Clearly, Staff  
7 itself does not see its audit report on historical operation expenses as being  
8 inconsistent with its own, or RUCO's, adjustments to future period projected  
9 expenses. The Commission should not reject RUCO's adjustments to PWEC  
10 and Sundance O&M expenses based on the Staff operation audit conclusions.

11  
12 Miscellaneous expense (lunches)

13 In its brief APS indicates that it is not aware of another instance when a  
14 party proposed disallowance of the cost of company-provided meals for  
15 employees. However, the fact that a party has not previously objected to an  
16 expense is no basis for concluding that the expense is appropriate. Further, APS  
17 has not established that other utilities have even sought recovery of such  
18 expenses.

19  
20 Lobbying Expense

21 APS claims that prior Commission decisions have disallowed lobbying-  
22 related expenses, not because they are *per se* improper, but because the utility

---

<sup>17</sup> Exh. RUCO-31 at 1-2 (Schlissel surrebuttal).

<sup>18</sup> Exh. S-34 at 95 (Dittmer direct); Tr. At 4184-85 (Dittmer).

<sup>19</sup> Exh. S-37 at 50-51 (Dittmer surrebuttal) and Tr. At 4186 (Dittmer).

1 had not demonstrated that the lobbying activities produced benefits for  
2 customers.<sup>20</sup> APS further argues that it has provided evidence that its lobbying  
3 activities have provided benefits to customers, and thus those expenses should  
4 be recovered from customers. However, APS' evidence merely demonstrated  
5 that customers received benefit from certain lobbying efforts. APS did not claim  
6 that it had demonstrated that customers received benefit from all of the lobbying  
7 efforts for which APS is seeking recovery. Further, it is undeniable that  
8 shareholders also received benefit from APS' lobbying efforts, and thus they  
9 should pay a portion of the costs. RUCO's proposed adjustment is to disallow  
10 only a portion (approximately \$785,000) of the lobbying costs sought by the  
11 Company.

#### 12 13 Amortization Expense

14 APS' requested amortization expense was \$10 million higher than its  
15 actual test year amortization expense. APS asserts that it calculated its  
16 amortization expense by multiplying the current authorized amortization rates by  
17 the individual asset costs and lives of amortizable assets.<sup>21</sup> However, APS has  
18 never provided the evidence necessary for RUCO to verify that APS performed  
19 the calculation that it claimed.<sup>22</sup> The Commission should not permit APS to  
20 recover a level of expenses merely because it claims the level is the correct one.  
21 APS is obligated by the Commission's rules to maintain the accounting records  
22 necessary to provide complete information about its operations, including its

---

<sup>20</sup> APS Brief at 71.

<sup>21</sup> APS Brief at 66; Exh. APS-57 at 18-19 (Rockenberger rebuttal).

<sup>22</sup> Exh. RUCO-26 at 16 (Diaz Cortez surrebuttal).

1 expenses.<sup>23</sup> Further, once a party has challenged APS' requested expense  
2 level, APS has the burden to produce evidence that it is reasonable.<sup>24</sup> It has not  
3 done so in this instance.

4 Over the course of the test year, the balance of amortizable assets  
5 increased 5.5%, but APS is requesting a 35% increase in amortization expense  
6 above the test year expense level.<sup>25</sup> At the hearing, APS' witness suggested that  
7 the disparity between the change in asset balance and the change in  
8 amortization expense could be explained by a change in the distribution of assets  
9 at the various amortization rates.<sup>26</sup> However, APS has never demonstrated that  
10 it actually experienced such a change in make up of its amortizable assets.<sup>27</sup>  
11 APS cannot merely claim that its calculation is correct and decline to provide the  
12 evidence to support its claim when its result is counter-intuitive in the face of  
13 other data.

14 In the absence of the data to verify the accuracy of APS' requested  
15 amortization expense, RUCO has estimated an appropriate amortization  
16 expense. While RUCO's approach may be unusual, it was necessary due to the  
17 lack of substantiation for the Company's request. RUCO recognizes that the  
18 amortizable plant balances have increased by \$29 million over the course of the  
19 test year, and estimates the appropriate adjustment to amortization expense by  
20 multiplying the plant increase by the composite amortization rate. RUCO's

---

<sup>23</sup> A.A.C. R14-2-212(G)(1).

<sup>24</sup> Decision No. 68487 at 21.

<sup>25</sup> Exh. RUCO-24 at 28 (Diaz Cortez direct); Tr. at 3424 (Diaz Cortez).

<sup>26</sup> Tr. at 2606 (Rockenberger).

<sup>27</sup> Tr. at 2607 (Rockenberger).

1 adjustment still permits a 12% increase in amortization expense,<sup>28</sup> which is more  
2 than generous considering that there was only a 5.5% increase in the plant  
3 balances.

4  
5 Incentive Pay

6 APS provides two bonus compensation plans for employees—an incentive  
7 pay plan, and a stock bonus plan. RUCO has proposed a disallowance of 20%  
8 of the cost of the incentive plan, but has not opposed the stock bonus plan. Staff  
9 on the other hand has allowed the cash-based incentive plan, and disallowed the  
10 costs of the stock bonus plan. RUCO and Staff's proposed disallowances are  
11 similar in dollar amounts--\$4.5 million and \$4.8 million, respectively.<sup>29</sup> RUCO's  
12 disallowance is based on a policy recommendation that ratepayers should not be  
13 expected to shoulder the entire incentive program that allows APS employees to  
14 earn additional compensation, when APS customers have seen repeated  
15 increases in their electric rates over the past 24 months. RUCO has not  
16 suggested that the Commission adopt both its adjustment and Staff's. While the  
17 two adjustments may target different aspects of the Company's incentive  
18 compensation plans, RUCO believes adopting either one would be appropriate.

19  
20 Property Tax Expense

21 RUCO has proposed an adjustment to the Company's property tax  
22 expense to recognize a decrease in the property tax rate that was adopted in

---

<sup>28</sup> Exh. RUCO-26 at 16 (Diaz Cortez surrebuttal).

<sup>29</sup> See RUCO's Initial Closing Brief at 21 and Staff's Post-Hearing Brief at 31.

1 2006. The Company has responded that if the 2006 tax rate change is  
2 recognized, the Commission should also recognize a 2006 change in the  
3 assessed value to which the property tax rate is applied.<sup>30</sup> APS further claims  
4 that the matching principle requires that rate recovery match with actual  
5 expenses to be incurred when rates are in effect.<sup>31</sup>

6 APS' brief has mischaracterized the matching principle, which has led it to  
7 an improper conclusion regarding the necessary adjustment to property taxes.  
8 APS witness Froggatt correctly noted that the matching principle, which is a  
9 convention not only of regulatory rate making, but also of accounting principles in  
10 general, requires a proper matching of the accounting elements (revenues,  
11 expenses and rate base, for utility accounting) over the same period of time.<sup>32</sup>  
12 The matching principle is not about matching revenue levels with the level of  
13 expenses incurred in a post-test year period. If the matching principle were what  
14 APS' brief has claimed, the concept would have no application as a general  
15 accounting convention, because the pricing of goods and services generally is  
16 not based on accounting, but on market forces. In rate making, however, prices  
17 are set by the regulator based on costs, as demonstrated in the utility's  
18 accounting records. Thus, APS' brief's definition of the matching principle is  
19 completely at odds with the statement of its own Vice President and Controller  
20 Mr. Froggatt.

21 APS' suggestion to base property tax recovery on the 2007 assessed  
22 value improperly matches the various rate making elements. Even if the 2007

---

<sup>30</sup> See APS Brief at 64.

<sup>31</sup> See APS Brief at 63.

<sup>32</sup> Tr. at 2318 (Froggatt).

1 assessed value is based on plant values as of December 31, 2005 as APS  
2 claims, that date is still beyond the end of the test year. Staff's witness agreed  
3 that the APS proposal to use the 2007 assessed value would create a  
4 mismatch.<sup>33</sup> Staff likewise agrees with RUCO's adjustment recognizing the  
5 decrease in the property tax rate.<sup>34</sup>

## 7 **COST OF CAPITAL**

### 8 Capital Structure

9 APS requests that its rates be set with a 54% common equity ratio. RUCO  
10 proposed a capital structure of 50% equity and 50% debt. APS argues that  
11 RUCO's proposed capital structure would undoubtedly reduce the Company's  
12 credit to non-investment grade.<sup>35</sup> However, APS overlooks the fact that its  
13 parent, Pinnacle West, which has higher operating risk than the Company, and  
14 thus would be expected to rely more heavily on equity, is capitalized with  
15 approximately 50% equity. APS also overlooks the fact that it maintained an  
16 investment grade bond rating before its recent capital structure shift, when it had  
17 approximately 45% common equity in its capital structure.<sup>36</sup> It is not appropriate  
18 for the Company, which has less risk than its unregulated parent, to have its  
19 rates determined with a capital structure that contains more common equity than  
20 that of its parent. Additional debt in a capital structure is appropriate for a  
21 company with less financial risk and thus less risk of default. The Commission

---

<sup>33</sup> Tr. at 4188-89 (Dittmer).

<sup>34</sup> Staff Brief at 35.

<sup>35</sup> APS Brief at 24.

<sup>36</sup> Exh. RUCO-11 at 26.

1 should adopt RUCO's recommended capital structure of 50% equity and 50%  
2 debt.

3 APS further objects to RUCO's proposed "phantom" capital structure,  
4 claiming that it ignores APS' current reality.<sup>37</sup> However, it is not unusual for a  
5 utility regulator to base rates on a capital structure that contains less equity than  
6 the utility actually has, on the basis that the actual capital structure may be  
7 imprudent.<sup>38</sup> APS also objects to RUCO witness Stephen Hill's comparison of  
8 APS' 46% debt-54% equity capital structure to capital structures of other utilities,  
9 claiming that Mr. Hill included short-term debt and financial ratios of utilities with  
10 junk ratings in his comparison.<sup>39</sup> There are many reasons to consider short-term  
11 debt when determining an appropriate capital structure, including the facts that it  
12 is not possible to reliably claim that construction is funded only by short-term  
13 debt, that regulated firms consistently use short-term debt, that bond rating  
14 agencies include short-term debt when calculating debt-to-capital and interest  
15 coverage ratios, and that failure to consider lower-cost short-term debt would  
16 result in overstatement of overall cost of capital.<sup>40</sup> In addition, Mr. Hill relied on  
17 many barometers to reach his conclusion that his 50-50 capital structure was a  
18 more appropriate capital structure for setting rates than APS' actual capital  
19 structure.<sup>41</sup> Further, though Staff witness David Parcell did not propose an  
20 alternative capital structure, Staff agrees with Mr. Hill that APS' actual capital  
21 structure contains a higher equity ratio than that of electric utilities in both its

---

<sup>37</sup> APS Brief at 23.

<sup>38</sup> David Parcell, *The Cost of Capital—A Practitioner's Guide*, 4-22, (1997)

<sup>39</sup> APS Brief at 23.

<sup>40</sup> Exh. RUCO-13 at 26-27 (Hill surrebuttal).

<sup>41</sup> Tr. at 2125 (Hill).

1 general and specific proxy groups, and therefore APS's capital structure reflects  
2 a lower financial risk than that exhibited by the proxy groups.<sup>42</sup>

#### 4 Return on Equity

5 For the most part, the Company maintains that only the cost of capital  
6 models that result in the highest returns should be relied on by the Commission  
7 in determining a fair rate of return on equity. While the Company claims to have  
8 considered the discounted cash flow ("DCF") model in its recommendation, in  
9 truth the Company, as even Staff concluded, "virtually ignored the results of the  
10 most commonly-used cost of capital methodology" – the DCF Model.<sup>43</sup>  
11 According to the Company, RUCO's application of the DCF model "... produces  
12 downwardly biased and even illogical results."<sup>44</sup> However, RUCO's 9.25% DCF  
13 recommendation closely approximates Dr. Avera's DCF recommendation of  
14 9.0%.<sup>45</sup> The Company's criticism of RUCO's DCF results is curious given that  
15 RUCO's DCF results are even higher than the Company's.

16 The Company believes that RUCO's DCF results are illogical and  
17 downwardly biased because one could apply a different DCF analysis to RUCO's  
18 proxy group and achieve a much higher result.<sup>46</sup> The Company claims that  
19 applying the multi-stage DCF model to the reference group used by RUCO in its

---

<sup>42</sup> Staff Brief at 41.

<sup>43</sup> Exh. S-8 at 35 (Parcel direct), APS Brief at 20-21.

<sup>44</sup> APS Brief at 22.

<sup>45</sup> In its brief, APS refers to Dr. Avera's 9.0% DCF recommendation without any updates.

APS Brief at 20.

<sup>46</sup> APS Brief at 22.

1 DCF analysis results in a 10.7% return on equity.<sup>47</sup> The Company's argument  
2 lacks merit.

3 The multi-stage growth formula suffers from two fundamental flaws, which  
4 is the reason why the standard DCF model or constant growth model is generally  
5 accepted in the industry as more reliable.<sup>48</sup> First, the multi-stage DCF makes  
6 more specific, detailed assumptions about the market than the constant growth  
7 DCF model, and it is therefore more likely to be inaccurate (i.e., with more  
8 detailed assumptions about specific events in the future, it is more likely to be  
9 wrong).<sup>49</sup> Second, it is often assumed that the final growth stage of the multi-  
10 stage DCF Model will equal Gross Domestic Product ("GDP") growth – the  
11 average growth rate of the entire economy.<sup>50</sup> In reality, that is not a reasonable  
12 assumption.<sup>51</sup> A comparison of GDP growth rates over the past 50 years shows  
13 that utilities grow at a rate about half the GDP.<sup>52</sup>

14 The Company analysis used to restate Dr. Hill's DCF analysis to arrive at  
15 a 10.7 return on equity suffers from the second flaw.<sup>53</sup> Substituting a growth rate  
16 equivalent to one-half of the projected GDP growth rate (which matches actual  
17 historical results) would produce an average multi-stage DCF result of 8.0%.<sup>54</sup>  
18 Therefore, if the Commission gave weight to the Company's consideration of a  
19 multi-stage DCF, the result would actually be an 8.0% return on equity, a full 125  
20 basis points lower than RUCO's recommendation.

52

*Id.*

53

*Id.* at 22.

54

*Id.*

1 It is ironic that the Company would argue for the use of a multi-stage DCF  
2 analysis since the Company's 9.0 % DCF recommendation is based on a  
3 constant growth analysis.<sup>55</sup> In fact, Dr. Avera, the Company's witness, used the  
4 multi-stage formula in several cases several years ago but had not seen fit to rely  
5 on it in his Direct Testimony in this case.<sup>56</sup> The Company's logic regarding the  
6 multi-stage DCF and its overall return on equity recommendation should be  
7 rejected.

8 The Commission should reject the Company's recommended return on  
9 equity, because it focuses only on the highest results presented by its witness.  
10 RUCO's proposed return on equity is based on an analysis of several models,  
11 and should be adopted.

#### 12 13 **RATE DESIGN/RATE SPREAD**

14 Several intervenors propose that rates be moved toward cost of service.  
15 However, all parties' witnesses on rate spread agreed that cost of service is not  
16 the sole factor to be considered in setting rates.<sup>57</sup> As discussed in RUCO's Initial  
17 Brief, rates were moved toward cost of service in APS' last rate case less than  
18 two years ago, and there have been numerous increases due to fuel costs since  
19 that time. Rate stability and continuity are necessary now more than ever.  
20

## 1 DEMAND SIDE MANAGEMENT

### 2 Interest on DSM adjustor

3 APS has apparently misunderstood the basis for RUCO's objection to  
4 APS' claim for interest on the demand side management ("DSM") adjustor. APS  
5 states that RUCO has claimed that APS should be precluded from recovering  
6 interest on the DSM mechanism because APS has failed to spend the full  
7 amount of DSM that was included in base rates.<sup>58</sup> However, RUCO's position is  
8 based on the lack of language in the Settlement Agreement providing for interest  
9 on the DSM adjustor balance. RUCO's reference to the fact that APS had not  
10 yet spent the \$10 million included for DSM in base rates was merely to  
11 demonstrate the irony in the timing of APS' request. While customers received  
12 no interest during the period APS spent less than customers were paying for  
13 DSM programs, APS is now seeking interest as we enter the period in which  
14 APS is expected to be spending more than \$10 million per year on DSM  
15 programs, and recovering the incremental amount the following year through  
16 the adjustor mechanism. However, RUCO's primary concern is that it would be  
17 inconsistent with the terms of the Settlement Agreement for APS to recover  
18 interest on the DSM adjustor balance.

### 19 20 Post-2008 DSM obligation

21 APS objects to RUCO's proposal that the Company be required to spend  
22 at least \$20 million per year on DSM programs beginning in 2008. APS claims  
23 that the \$4 million increase RUCO proposes is unnecessary, and suggests that it

---

<sup>58</sup> APS Brief at 120.

1 is premature given that the existing DSM programs are new (and APS suggests it  
2 is overstating to say that they are "up and running"). Ironically, APS believes the  
3 programs are sufficiently "up and running" to request recovery of net revenues  
4 APS believes it will lose as a result of the programs' operation. APS cannot  
5 simultaneously claim that the programs are resulting in lost revenues and that the  
6 programs are not up and running.

## 8 **POWER SUPPLY ADJUSTOR/BASE COST OF FUEL**

### 9 Base cost of fuel

10 APS agrees that RUCO and the Company are "relatively close" in their  
11 proposals for the base cost of fuel.<sup>59, 60</sup> The primary difference between RUCO's  
12 and APS' positions is attributable to the use of 2006 (RUCO) and 2007 (APS)  
13 forecasts.<sup>61</sup> Staff likewise objects to APS' use of 2007 forecasts, which have not  
14 been subjected to the same level of scrutiny parties were able to apply to the  
15 2006 forecasts APS relied on in its direct testimony.<sup>62</sup> Fuel forecasts are  
16 complex to perform and subject to both judgment and error.<sup>63</sup> APS' attempt to  
17 modify their request mid-case prevented parties from having sufficient time to  
18 review the 2007 forecasts in sufficient depth to rely on them as being accurate.

19 RUCO's proposed base cost of fuel and purchased power is 1.29 mills  
20 below APS' proposed level, and would result in approximately an additional

---

<sup>59</sup> APS Brief at 34.

<sup>60</sup> As it did in its Initial Brief, RUCO will use the term "fuel" to refer both fuel and purchased power, unless otherwise stated.

<sup>61</sup> APS Brief at 33-34.

<sup>62</sup> Staff Brief at 7.

<sup>63</sup> See also Staff Brief at 7.

1 \$38.7 million of additional carryover balance to be recovered in 2008.<sup>64</sup> APS  
2 claims that its proposal would result in a carryover balance of \$58 million.<sup>65</sup>  
3 Thus, RUCO's proposed base cost of fuel would result in a carryover balance of  
4 approximately \$97 million, still below the \$110 million that would be recovered in  
5 2008 through a 4 mil adjustor. RUCO's proposed base cost of fuel is reasonable  
6 and should be adopted.

7  
8 90/10 sharing mechanism

9 Throughout the course of this proceeding, APS has advocated a PSA  
10 mechanism that retains the 90/10 sharing provision of the current PSA. In its  
11 Initial Brief, however, APS has changed course and suggests that the  
12 mechanism be eliminated, characterizing the mechanism as a "penalty  
13 provision."<sup>66</sup> Intervenor Arizona Utility Investors Association ("AUIA") likewise  
14 recommends that the 90/10 sharing mechanism be abandoned, claiming that  
15 because APS' growth is met by high-cost resources, fuel costs will increase even  
16 if fuel prices stabilize.<sup>67</sup> These parties overlook the purpose of the sharing  
17 mechanism. It is not to serve as a penalty, but to create an incentive that aligns  
18 APS' interests in acquiring fuel with the interests of customers who will ultimately  
19 be paying the costs of prudently acquired fuel through the PSA.

---

<sup>64</sup> Based on APS' claim of 1 mil lower base cost of fuel results in \$30 million increase in the deferral balance. See APS Brief at 34.

<sup>65</sup> APS Brief at 33.

<sup>66</sup> APS Brief at 35.

<sup>67</sup> AUIA Brief at 14.

1 To a large extent, Staff's fuel audit in this proceeding confirmed that APS  
2 has been prudently managing its fuel procurement.<sup>68</sup> However, Staff's  
3 conclusion is an indicator that the existing 90/10 sharing mechanism is serving its  
4 purpose. Eliminating the incentive would leave the Commission and APS'  
5 customers with no assurance that APS will continue to minimize overall fuel and  
6 purchased power costs. Further, APS had agreed to the 90/10 sharing  
7 mechanism in a time when growth was being served by higher fuel cost  
8 resources. The fact that total fuel costs are unlikely to decrease even if prices  
9 stabilize is nothing new, and is no reason to reject the mechanism now. The  
10 appropriate action to minimize the impact of this phenomenon on APS is to  
11 increase the base cost of fuel from its current level, which APS, Staff and RUCO  
12 have all recommended.

13 Finally, APS' recent problems with Palo Verde Nuclear Generating  
14 Station's performance may signal that the 90/10 sharing mechanism may not be  
15 enough of an incentive by itself to insure that APS operates its generation fleet in  
16 the most appropriate manner. Now is not the time to eliminate the 90/10 sharing  
17 mechanism, especially since no party has proposed any replacement incentive  
18 mechanism.

## 20 ENVIRONMENTAL IMPROVEMENT CHARGE

21 APS foresees investing a large amount of capital into environmental  
22 improvements of its plants, and uses that fact as the justification for seeking

---

<sup>68</sup> Even with the existing 90/10 sharing mechanism, Staff's audit found a number of areas where the Company could improve its fuel procurement practices. See APS Brief at 79-86.

1 special rate making treatment to recover its investments in environmental  
2 improvements. APS' proposal is for a form of an adjustor mechanism that it calls  
3 an environmental improvement charge ("EIC"). APS proposes that through the  
4 EIC, it be permitted to collect the costs it budgets each year for environmental  
5 improvements over the upcoming twelve months.

6 RUCO has no objection to APS investing in technologies that will result in  
7 generating facilities having less negative environmental impacts. However,  
8 investment to protect the environment, especially investment that is otherwise  
9 required by law, is no justification to discard the traditional rate making model  
10 that requires a rate case so that the Commission can examine all the moving  
11 parts of the rate making formula in determining rates. Environmental protection  
12 has always been a part of a utility's obligation, and the existing rate making  
13 model has proven adequate to fund the necessary investment. Single-issue rate  
14 making via an adjustor mechanism is not appropriate for recovery of such  
15 investments.

16 APS correctly notes that all adjustor mechanism are examples of single-  
17 issue rate making. However, only certain types of expenditures qualify for  
18 recovery through an adjustor mechanism—recovery of other expenses must  
19 comply with the Arizona Constitution's requirement that rates only be changed as  
20 part of a rate case finding a utility's fair value rate base.<sup>69</sup> The expenses for  
21 which an automatic adjustor are appropriate are expenses over which the utility  
22 has no control, and which constitute a significant portion of the utility's expenses

---

<sup>69</sup> See *Scates v. Ariz. Corporation Comm'n*, 118 Ariz. 531, 535, 578 P.2d 612, 616 (App. 1978).

1 such that even a small change in price will have a noticeable effect on its rate of  
2 return.<sup>70</sup> The Commission has also required that only expenses that are  
3 particularly volatile are recoverable through an adjustor mechanism.<sup>71</sup> APS'  
4 environmental compliance investments do not meet these criteria, and should not  
5 be recovered through an adjustor mechanism.

## 7 **EXTRAORDINARY RATE MAKING METHODS**

8 The extraordinary rate making methods that APS proposed in this  
9 proceeding were not part of the Company's initial request for rate relief, but only  
10 arose later in the proceeding. APS has only requested consideration of such  
11 devices to "bridge the gap" between the amount of its requested rate relief and  
12 an amount that the Commission might otherwise authorize based on adjustments  
13 proposed by Staff and intervenors.

14 APS concedes that the primary driver of its rate request is fuel costs,  
15 which make up 72% of its total requested increase.<sup>72</sup> While Staff and RUCO  
16 dispute the degree to which APS requires any additional rate relief above its fuel  
17 costs, APS, Staff and RUCO are all recommending PSAs that will substantially  
18 accelerate APS' fuel recovery.

19 APS suggests that the four extraordinary rate making devices it proposes  
20 be used to address any shortfall between rates that the Commission would  
21 otherwise authorize, and rates that APS claims are necessary to satisfy Wall

---

<sup>70</sup> Op. Att'y Gen. 71-15 at 2 (1975).

<sup>71</sup> See Decision No. 68302 ("adjustment mechanisms should therefore be used only in extraordinary circumstances to mitigate the effect of uncontrollable price volatility or uncertainty in the marketplace."); Decision Nos. 68176, 66849.

<sup>72</sup> APS Brief at 1.

1 Street's concerns. While the Commission should not set rates based on Wall  
2 Street's requirements in the first place, Wall Street's expectations are likely not  
3 as high as APS claims. Wall Street does not generally expect that regulators will  
4 grant the entirety of a utility's requested rate relief. Standard & Poor's  
5 recognized the Commission's January and May 2006 actions accelerating fuel  
6 cost recovery as generally constructive decisions,<sup>73</sup> but in neither instance did  
7 the Commission grant APS the full relief it was seeking. Likewise, in the equity  
8 report APS attached to its Initial Brief, Credit Suisse stated that it was "somewhat  
9 amazed [Great Plains Energy] got virtually all that it asked for."<sup>74</sup> There is ample  
10 evidence that it is unnecessary for the Commission to add on to what it otherwise  
11 finds to be fair rates in order to satisfy an alleged Wall Street expectation that  
12 APS would receive the full rate increase that it has requested.

13 APS claims that the decreasing return on equity it has experienced over  
14 the past five years is evidence that its requirement for large capital expenditures  
15 has negatively impacted its ability to earn its allowed return.<sup>75</sup> However, the  
16 Commission should not overlook the impact that under-recovery of fuel costs  
17 may have played in APS' results. Until the PSA was put in place less than two  
18 years ago, APS' rates had no mechanism for rates to track changes to fuel costs.  
19 And since the PSA has been in place, fuel cost volatility has exceeded the PSA's  
20 ability to automatically provide timely recovery without additional Commission  
21 action. Thus, during the last five years, when fuel prices have been particularly  
22 volatile and markedly increasing, one cannot attribute APS' failure to earn its

---

<sup>73</sup> Exh. APS-4 at 13-14 (Brandt direct).

<sup>74</sup> See APS Brief Exhibit 3.

<sup>75</sup> APS Brief at 30.

1 allowed returns exclusively to large capital expenditures to meet growth. Further,  
2 the additional flexibility in APS' proposed PSA (with which RUCO agrees) will  
3 allow the mechanism to more smoothly accommodate both changes to fuel  
4 prices and growth's impact on the amount of fuel APS requires.

## 6 **CONCLUSION**

7 Over the last two years, the Commission has repeatedly acted to increase  
8 APS' rate recovery, particularly through the adoption of the PSA mechanism and  
9 the two subsequent actions to allow additional recovery above that normally  
10 permitted by that mechanism. The Commission has also permitted APS to  
11 acquire and rate base (albeit at a discount) the generation assets formerly owned  
12 by its unregulated affiliate, to the benefit of both APS and customers who will  
13 continue to have access to those resources. Any suggestion that the  
14 Commission has overlooked APS' opportunity to recover adequate rates is  
15 misguided. The Commission should continue to balance APS and customers'  
16 interests using its traditional rate making methods that have served the public  
17 well.
